

The Green I Initiative Foundation (TGII)

Over 80% of the people in India live in villages so only 18% of the total population of the country live in urban areas. There are many villages in India which are very small with just a few hundreds of people living in them. There is no electricity and the water supply is erratic as the surrounding lakes, tanks and rivers often dry up when the monsoons fail, or during summer. Schools and hospitals are so far away that they cannot be reached easily. If any project channelized at improvement of the economic and social status of the country is to be taken up, it has to be directed towards villages and based on the life of the villages.

The keenest issue to be focused more is the electricity shortage. These shortages further deprive these people from sustainable economic and educational opportunities. Indian economy can achieve a lot more if these people were to be given proper energy infrastructure and a chance to contribute to skilled labour. The Green “I” Initiative Foundation (previously known as The Green India Initiative), solves this issue by partnering with the donor organizations and developing “Green Sustainable Projects” which can lend the hand to rural schools and communities. **TGIIF is a bridge between Corporate's (eligible for CSR – Corporate Social Responsibility), International & National Level NGO's (like Rotary Club), Religious Organizations, Individual Social Donor.** We have designed few sustainable green projects which includes donation of few renewable equipment's like Solar LED Lanterns, Solar Cookers, Solar Home Lights System & Bio-Gas plants . Clean technology protects the environment by providing pollution free and cost effective energy to rural areas for their growth.

The Green “I” Initiative Foundation (previously known as The Green India Initiative), strongly supports, promotes and executes environment related initiatives undertaken by Corporate, NGOs, Individuals and Society at large.

Core Purpose

Our Core Purpose is to channelize the appropriate investment towards the advancement of our beloved country while serving and taking a responsibility of underprivileged and saving environment at large.

Core Values

Contribution:

Our main focus will be on our contribution towards our supporters, our beneficiaries, our country in the form of knowledge, help & technology.

Adaptability:

We will always strive for new changes in the organization with the goal to achieve higher returns. We are always happy to adopt new technology & knowledge for the growth of our organization at large.

Satisfaction:

Whatever we do and however we do to provide excellent services to our beneficiaries, we must justify it on the basis of our inner satisfaction and we shall not compromise on it over the period of time.

Synergy:

We adopt the value Synergy to celebrate and respect the differences of each individual which will be greater than the sum of separate individuals. In spite of individual differentiations & limitations, we will focus on the growth of our organization, applying equal energy towards it.

GramEnergy

Through the 'Gram Energy' initiative, The Green "I" Initiative Foundation has designed a Green Village Program to adopt a needy school or backward village of India. Any organization through its CSR (Corporate Social Responsibility) or social initiatives would like to see its efforts making some real impact can execute GramEnergy. These Initiatives are innovative as well as sustainable, resulting the growth of those who are in need.

GramEnergy – Education (Module - I)

With this module we intend to support underprivileged students from rural schools where students unable to study due to shortage of electricity. 200 to 500 Solar Home Lights (decentralized or centralized charging facility) with 1 or 2 Solar Cooker(s) will be given, to enhance their educational condition as well as utilize free energy to a large extend.

GramEnergy – Education (Module - II)

To support and to overcome intensive power cut of rural schools, we intend to provide minimum 4 KW solar PV system which can fulfill their energy need. These projects will provide free and clean electricity to Indian schools through solar electric system which has 5 year life span, so they may extend learning time and will have a access to E learning too.

GramEnergy – Water

This project is design to support underprivileged villagers by setting up 24 x 7 ground water supply directly to their doorstep through Solar Duel Pump System. This project saves energy and time of Indian Rural Women so they can invest their quality time for other productive work. This also fulfills their basic water need which can lead to better life.

GramEnergy – Village

Through this project we intend to support underprivileged villagers to fulfill their basic energy needs through solar energy electrification. In this project we did a provision of Solar Home Lighting System to 100 rural residential houses from any backward village of India.

Our expertise will enable you to successfully undertake a wide range of social projects:

(As per Schedule VII of section 135 of the companies act, 2013 , CSR rule)

1. Promoting education; including special education and employment enhancing vocational skills especially among children, women, elderly and differently abled.
2. Ensuring environmental sustainability, ecological balance, conservation of natural resources.
3. Rural development projects.
